JAPAN FOOD HUB · MANAGEMENT SYSTEM

What the Hub system does

One system for the three shops at Japan Food Hub: QR ordering, sales, hygiene records (HACCP), staff and payroll, and simple bookkeeping in GEL. It runs in the browser on any phone, tablet or PC. Each shop only sees its own data; the owner sees everything.

Part	What you can do with it
QR ordering & sales	Guests order from the table in 6 languages. Orders go to each kitchen. Sales by day, shop and item.
Hygiene (HACCP)	Daily checks before opening, during service and after closing. Temperatures, problems and fixes are kept for inspections.
Staff & payroll	Time clock, weekly shifts, leave and sick days, overtime and monthly pay, following the Georgian Labour Code and each employment contract.
Books	Income and expenses per shop and for the Hub (common costs), VAT 18% estimate, monthly settlement per shop, payroll tax and pension.
Exports	CSV files for the accountant and for other software (e.g. iiko): sales summary, journal, timesheets, hygiene records.
Backup	Automatic daily copy of all Hub data (kept 35 days). The owner can also download a full copy at any time.

Records are never deleted. A mistake is corrected by adding a correction or a reversal, so the history is always complete.

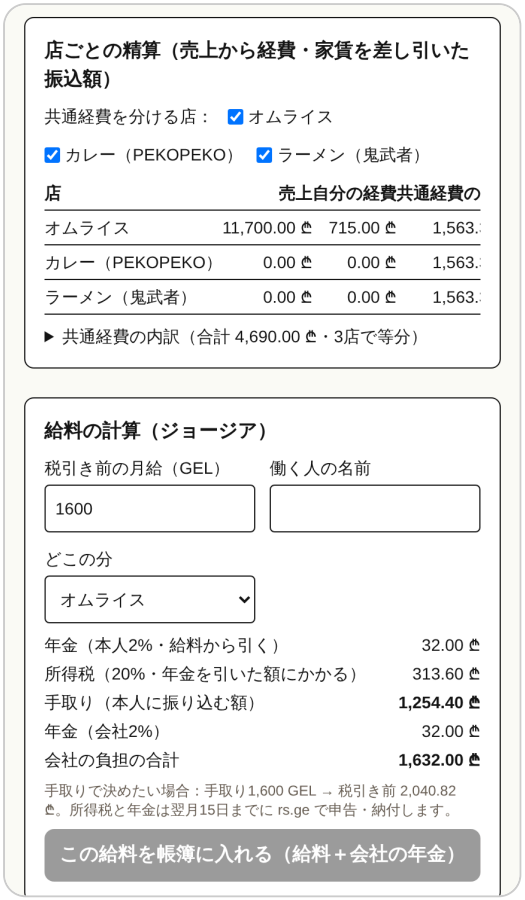

1. Books (accounting for Georgia)

What you can do

- See income, expenses and profit for the month at a glance, for one shop or the whole Hub.
- See the VAT estimate (output VAT on sales minus VAT on expenses with an RS invoice).
- Record every payment in or out: date, shop, category, amount incl. VAT, payment method, supplier, invoice number.
- Import each day's QR-order sales into the books by shop with one tap (never twice).

Categories include food and drink sales, delivery-app sales, food and drink purchases, rent, landlord income tax on rent, utilities, internet, waste, salaries, employer pension, card fees, delivery-app commission, supplies and repairs.

Monthly settlement per shop

- Common costs (rent, utilities, internet, supplies) are split between the shops automatically.
- Each shop sees: its sales, its own costs, its share of common costs, and the amount to transfer.

Payroll (Georgia)

- From gross salary: income tax 20% (after pension), employee pension 2%, employer pension 2%.
- Also works backwards from a guaranteed net salary.
- One tap puts the month's salaries and employer pension into the books.

The books prepare the numbers and the CSV journal that the accountant uses for the monthly RS.ge declarations. The declaration itself is still submitted on rs.ge.

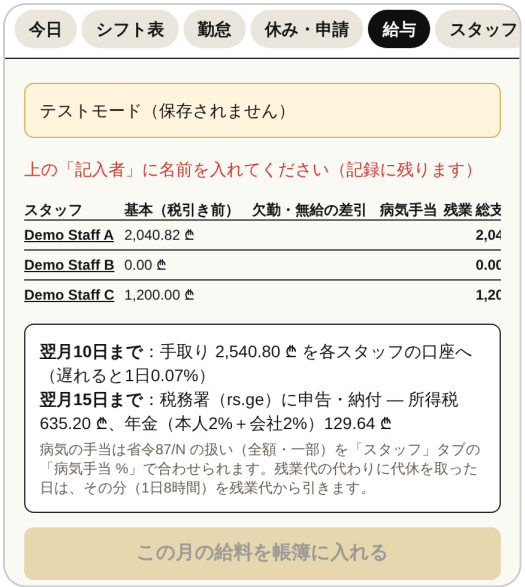

2. Staff, shifts and payroll

What you can do

- **Time clock:**
  staff clock in, break and clock out on the shop tablet with their own code.
- **Shifts:**
  plan the week; staff can mark days they want or cannot work. Reminder if next week's shifts are not out 7 days before.
- **Leave & sick days:**
  paid leave (24 working days a year after 11 months), unpaid leave, sick days with a medical certificate.
- **Pay:**
  monthly or hourly pay, overtime over 40 hours a week at 125%, public holidays, deductions for unpaid absence.
- **Payslips:**
  print monthly payslips.
- **Timesheet CSV:**
  the work-time record required by the Labour Code (Art. 24.11), kept at least one year.

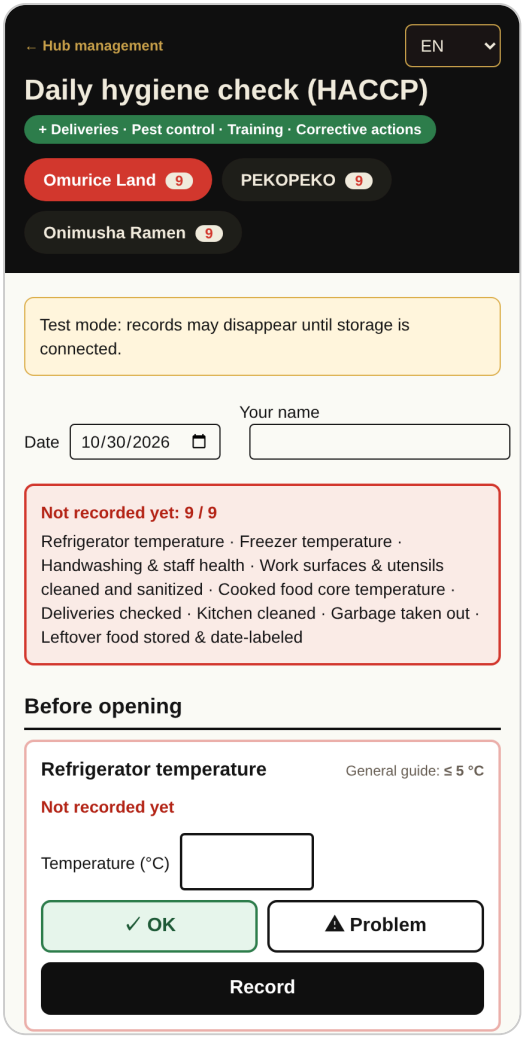

Privacy: each shop manager sees only their own staff. Pay and contract terms of one shop are not visible to the other shops.

Monthly pay overview

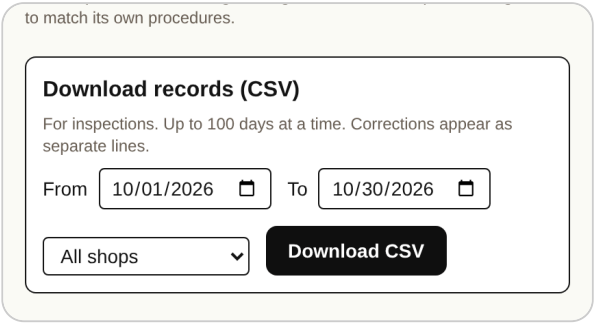

- Gross pay, absence deductions, sick pay, overtime and total for each person.
- Deadlines shown: net pay to staff by the 10th, income tax and pension to RS.ge by the 15th, with the exact amounts.

3. Daily hygiene check (HACCP)

What you can do

- Each kitchen (Omurice Land, PEKOPEKO, Onimusha) records its own checks every day on a phone.
- **Before opening:**
  fridge (≤5 °C) and freezer (≤-18 °C) temperatures, staff health and handwashing, clean surfaces.
- **During service:**
  cooked food core temperature (≥75 °C), deliveries checked.
- **After closing:**
  kitchen cleaned, garbage out, leftovers stored and date-labelled.
- A red list shows what is not recorded yet today.
- Extra logs: deliveries, pest control, staff training, corrective actions.
- Available in English, Georgian, Russian, Chinese, Korean and Japanese.

Records for inspections can be downloaded as CSV (up to 100 days at a time). The limits are general guidelines and can be changed to match the shop's procedures.

4. Data, access and backup

Topic	How it works now
Who sees what	Staff PIN to open the Hub screens. Owner PIN sees all shops. Each shop has its own PIN and sees only its own staff, pay and books.
Records	Nothing is deleted. Corrections and reversals are added, so every change can be traced.
Backup	Automatic daily copy of all Hub data, kept 35 days. The owner can download a full copy (JSON) at any time.
Exports	Sales summary by day / shop / item, order list, books journal, timesheets and hygiene records as CSV.
Other software	The sales summary CSV can be imported into accounting or stock software. If iiko needs a specific format, we can match it.
